

**Sector:** Food Industry  
**Area:** 50 sqm  
**System:** MMA Freeflow system + Polymer Bead (Slip resistant)  
**Colour:** Monocolour Beige

Quickset resin flooring Ltd were called upon to provide a slip resistant finish to a small corridor. The customer needed a solution that provided a hygienic, seamless, mono colour finish. It was advised to install an MMA self levelling system and incorporate a slip resistant additive into the final seal coat, using a polymer bead.

This system provides a textured finish while providing a seamless hygienic surface for cleaning and maintenance. The entire area was mechanically prepared to remove the existing floor finish, primed, 3mm pigmented body-coat installed, and two encapsulating seal coats in just one 12 hour shift.

This system is designed:

For areas that are subject to foot traffic where slip resistance is required. Polymer bead is to only be used in areas such as corridors, entrances and exits, small toilet areas and more. Certain environments will require a more textured profile and would need to incorporate a quartz finish.
